#### Empathy Map Canvas:

An empathy map is a simple, easy-to-digest visual that captures knowledge about a user's behaviours and attitudes.

It is a useful tool to help teams better understand their users.

Creating an effective solution requires understanding the true problem and the person who is experiencing it. The exercise of creating the map helps participants consider things from the user's perspective along with his or her goals and challenges.

#### Example: Personalized Nutrition Planning

This example helps understand the user's eating habits, health goals, and daily challenges. The insights gathered are used to create a personalized Nutrition Assistant that offers appropriate nutrition plans and meal suggestions.
