Proposed Solution Template

Date	13 July 2026
Team ID	SWTID-2026-8698
Project Name	Nutrition Assistant
Maximum Marks	2 Marks

Proposed Solution Template:

This template describes the proposed solution for the identified problem. It explains the solution's features, benefits, uniqueness, and future growth potential.

S.No.	Parameter	Description
1.	Problem Statement (Problem to be solved)	Many people find it difficult to create personalized nutrition plans and calculate daily calorie and macronutrient requirements. Existing diet plans are generic and do not meet individual health and fitness needs.
2.	Idea / Solution description	Nutrition Assistant is a MERN stack web application that generates personalized nutrition plans based on user details such as age, gender, height, weight, activity level, and fitness goals. It provides calorie calculations, macronutrient distribution, and meal recommendations.
3.	Novelty / Uniqueness	The application combines user health information with automatic nutrition calculations to generate customized meal plans. It also stores user profiles and nutrition history for future reference.
4.	Social Impact / Customer Satisfaction	The solution promotes healthy eating habits by providing personalized nutrition guidance. It helps users make informed food choices and supports them in achieving their health and fitness goals.
5.	Business Model (Revenue Model)	The application can follow a freemium model, where basic nutrition plans are free and premium features such as AI-based recommendations, advanced meal planning, and detailed health reports are available through a subscription.
6.	Scalability of the Solution	The application can be enhanced by adding BMI calculation, AI-based food recommendations, weekly meal planners, progress tracking, wearable device integration, and multi-language support to serve a larger user base.
